

Level 5 Hospital Edition

Equipment inventory, maintenance and compliance software for Level 5 hospitals.

KES 650K–800K
one-time license

KES 20,000/yr
support & checks

2 licence bands
sized to your equipment count

About Cirqen Labs

Cirqen Labs is a software platform for hospital biomedical engineering departments. It covers equipment registration, maintenance scheduling, job cards and spare-parts tracking, and an audit trail of completed work.

The Level 5 Edition covers what a Level 5 biomedical engineering department runs day to day, priced and structured for how these facilities typically procure software.

What's Included

Module	What it does for your team
Equipment Inventory	Full asset register — department, manufacturer, model, serial, location, status.
Maintenance Scheduling	Calendar-based, group-aware planned preventive maintenance (PPM) — a machine serviced early or late stays credited to its planned month.
Job Cards & Workshop	Work orders, spare-parts usage tracking, workshop repair records.
Reporting	Equipment status, repair history, maintenance compliance reports for management and inspection visits.
Users, Audit Log & E-Signatures	Role-based accounts, append-only audit trail, digital sign-off on completed work.
Onboarding	Data migration from your existing records and on-site staff training — included in every licence (see Licence & Pricing).

Licence & Pricing

Standard Licence

KES 650,000 one-time

Up to 700 equipment records · unlimited user accounts

Included with this licence:

- ✓ Full platform access — all modules listed above
- ✓ Data migration of your existing equipment/maintenance records, up to 700 items
- ✓ 1-day on-site staff training session
- ✓ Go-live support through your first full maintenance cycle

Large Facility Licence

KES 800,000 one-time

Up to 1,200 equipment records · unlimited user accounts

Included with this licence:

- ✓ Full platform access — all modules listed above
- ✓ Data migration of your existing equipment/maintenance records, up to 1,200 items
- ✓ 2-day on-site staff training session, covering technologist and supervisor workflows separately
- ✓ Go-live support through your first full maintenance cycle

Both are a single, one-time purchase — no recurring licence fee. Bands are a starting point, not a hard technical cap; talk to us if your equipment count sits between or above these.

Annual Support & System Checks — KES 20,000/year

Included every year:

- ✓ Software patches, bug fixes & security updates
- ✓ Remote support, business hours (email/phone)
- ✓ One annual remote system health check — data integrity & backup verification
- ✓ Unlimited user accounts — no per-seat fee
- ✓ Additional staff training sessions beyond what's included at purchase, at no extra charge

Larger one-off requests — an on-site visit, a custom feature, a major version upgrade — are scoped and agreed with you directly rather than charged from a fixed price list.

Why This Model Fits a Level 5 Hospital

A one-time purchase, rather than a recurring subscription, matches how Level 5 facilities actually budget — a capital line item is far easier to get approved than a new recurring vendor line, and once purchased, the system keeps running even in a year where the support renewal is delayed.

What you gain immediately:

- One place to see every piece of equipment, its status, and its service history
- Maintenance that happens on schedule instead of when someone remembers
- An audit trail inspectors can actually follow

What stays flexible:

- Unlimited users and free additional training as your team grows
- No recurring licence cost to renegotiate — only the small annual support fee

Terms & Next Steps

- **Payment:** 50% on signing, 50% on go-live. Annual support fee billed on the anniversary of go-live.
- **Implementation:** typically 2–3 weeks setup and configuration, 1–2 weeks for migration and training, running in parallel where possible.
- **Ownership:** this is a one-time purchase — the hospital owns its deployment; the annual fee covers support and updates only, not a usage licence.
